Dear Sir/Madam,

As a GNU/Linux System Administrator and Golang, Developer, I'm interested in the posted Junior Golang Developer position.

For many years, I was working as a GNU/Linux, FreeBSD System Administrator, and I was responsible for designing, implementing, and maintaining various cutting-edge servers and services at a large scale with a massive user base. My background in multiple distributions of open-source Operating systems allowed me to understand the DevOps and agile concepts and apply them to my working environments through containerizing the application and distributing them from different perspectives and from request loads to geographical requests on virtual machines hosted by public and private cloud. Also, automate the mentioned process via Ansible and Terraform. Moreover, I was privileged to teach concepts and technologies like LPI (Linux Professional Institute) courses. It was my honor to help the next generation to grow.

Besides, I was Research Assistant in Prof. Bentahar's lab at Concordia University, Montreal, working on real-time recommendation systems based on knowledge graphs via native graph databases like Neo4j during my master's Applied Science in Quality Systems Engineering.

Furthermore, I don't consider myself a senior developer. Although I was a senior Unix Administrator and worked as a developer during my master's in Concordia University and after that, I still had to work on my expertise and knowledge in the development domain. I have t

Hence, based on my experience in administration and developing applications and services, besides my familiarity with the job description, I would be honored to help you with the Junior Golang Developer role.

Sincerely Yours,

Seyed Maziar Sojoudian
